

Eunoia: airship yacht concept

Peter Lobner, 5 August 2019

This airship was designed by Thomas Tzotzi in 2010 with the goal of helping the tourism industry in a developing country flourish by offering exotic airship experiences while “keeping balance between nature and science while traveling.” Here’s how Yanko Design author Chris Burns described this airship:

“The airship is designed to carry eight passengers in luxury. Tzortzi notes: “This may seem out of context with a project that features high social and environmental consideration, but it is designed to create aspiration for airships to be brought back practically.” The airship travels at a slow speed, providing time for passengers to enjoy their trip and see the sights they’d otherwise not have time to take in from on high. Solar power panels spread across the top of the ship, the ship full of helium, no harm is done in this transport in the least. There’s a viewing capsule in the gondola, a sundeck across the top of the ship, and a viewing room in the nose of the structure.”

The airship has different venues for enjoying the surroundings: a suspended viewing capsule, a sundeck spread across the top of the hull, and a viewing room in the nose. You'll find more details on this airship on the Yanko Design website at the following link. This was the source of the graphics in this section.
